

Claims

1. An aldehyde resin binder for a fiber reinforced antifouling paint comprising
 - a) 2 to 20 parts per 100 parts of aldehyde resin of an aluminium di-secalkoxide acetoacetic ester chelate (Component A) represented by the following formula (I):

- wherein $\text{R}_{\text{sup}.1}$ represents a sec.-alkyl group having 3 to 10 carbon atoms, or a cycloalkyl group; and $\text{R}_{\text{sup}.2}$ represents an alkyl group having 1 to 10 carbon atoms, or a cycloalkyl group;
- b) 0,5 to 8 parts per 100 parts of aldehyde resin of a monoalkoxy organotitanate-IV (Component B) represented by the following formula (II):

- wherein $\text{R}_{\text{sub}.3}$ is a monovalent organic group having from 2 to 30 carbon atoms or a substituted derivative thereof; X in the above formulae independently represents an acylate group, a sulfonic acid residue, a phosphoric acid residue or a pyrophosphoric ester residue, or a mixture thereof.

2. The paint or paint base of claim 1 wherein the total amount of said fiber-reinforced aldehyde resin plus said additive Component A is between about 15% and about 45% based upon the total weight of the paint or paint base composition .
3. The paint or paint base of claim 1 wherein the total amount of said fiber-reinforced aldehyde resin plus said additive Component B is between about 15% and about 45% based upon the total weight of the paint or paint base composition .
4. A process for providing a high-build marine antifouling paint or paint base characterized by a fiber - reinforced aldehyde resin as binder and containing metalliferous pigments which are sparingly soluble in seawater which comprises the steps of:

- (a) adding said Aluminium di-sec-alkoxide acetoacetic ester chelate (Component A) and thereafter
- (b) adding said monoalkoxy organo-titanate-IV (Component B- as defined in claim1) to said aldehyde resin to provide a paint or paint base, said additive Component A being present in an amount of between about 0,4% and about 4%, and said additive Component B- as defined in claim 1- being present in an amount of between about 0,2% and about 2%, the total amount of said Additive Component A and Additive Component B being between about 0,5% and about 5% based upon the total weight of the paint or paint base.
- 5
- 10
5. The process of claim 4 wherein steps (a) and (b) are carried out simultaneously.
6. An antifouling coating composition comprising a binder prepared according to claim 4 and, one or more auxiliary additive selected from the group consisting of pigments, antisepting agents, plasticizers, solvents, biocides , fibers, stabilizers and film consumption regulators.
- 15
